

A

A. Best-Ever Picture Screw

This screw has thin, large-diameter threads that displace little plaster but hold well. The 3/8" diameter integral stepped washer lies flush to the wall, preventing the levering action that often loosens standard screws. It goes in easily using square/slot/Phillips drivers and holds 20 lb (30 lb in our tests). Works well with wall-hung phones or other items with keyhole slots. Truly the best on the market.

00F14.55 Picture Screws (10) **1+ \$4.50 10+ \$4.00**

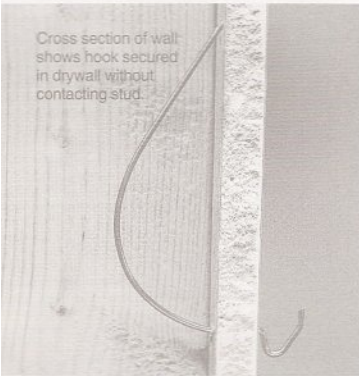

Shown actual size.

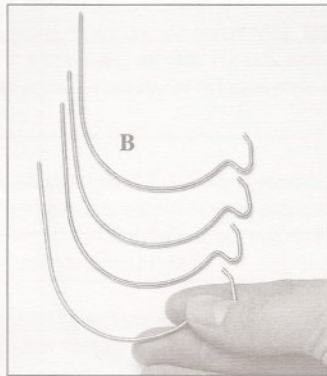

B. Monkey Hook

This deceptively simple hanger installs easily in drywall without tools. Pierce the wall with the sharp point and slide it in. Weight on the hook flexes the spring tail, providing tension to keep the hook firmly in place. Reusable, it leaves a small, tidy hole that is easily concealed with a dab of compound. Made of high-carbon spring steel, it holds 50 lb. Package of four.

00F14.50 Monkey Hooks (4) **1+ \$4.50 10+ \$4.00**

Cross section of wall shows hook secured in drywall without contacting stud.

C. Painter's Pyramid™

Elevating a project on a board with nails or screws driven into it is an old finisher's trick that gives access to multiple surfaces at once. These simple supports do the same thing and are quick to set up, non-marking, and compact to store. Molded from a solvent-resistant polymer, they will not react with finishes or wood. The tip presents a small contact surface to prevent blemishing the finish, and is rounded to minimize denting all but the softest material. Each support is 2" high and has a load rating of 200 lb. Sold in packages of 10, they nest together neatly for storage. A real time saver. Color may vary.

Painter's Pyramid™ (10) **1+ \$6.50 3+ \$5.75**

C

D. Nozzle Caps

These small, natural latex rubber socks are excellent for sealing partly used tubes of caulking, replacing lost caps of glue bottles or line chalk containers, etc. Made from thick rubber, they seal well on nozzle diameters from about 1/4" to 3/4". Since only a part of the nozzle has to fall within this diameter range, it covers just about everything from toothpaste-type tubes up to caulk bottle tips. These are a much better solution than putting a nail over the nozzle tip. Also handy for capping the air inlet on air tools. Package of 20.

E. Rhino Tarp Clip

This clip is different from other tarp clips in several ways. The clamping area is larger, and there is a hook as well as an eye at the end. With its positive lock mechanism, it resists loading forces of 50 lb. Accepts rope up to 1/2" in diameter. Invaluable for gripping plastic film and other sheet material.

XH522 Rhino Clip, ea.

F. Socket Adapters for Hand Drills

There are times when you wish you had an air gun for nut running. These are the next best thing. The three socket adapters have hex shanks and let you use any of your sockets (1/4", 3/8" or 1/2") with a hand drill. Suitable for both rechargeable and corded drills, you need only use them on one job to make them worth it at this price.

99W69.01 Socket Adapters, set of 3
